oats, Noodles, sabji, meals & more

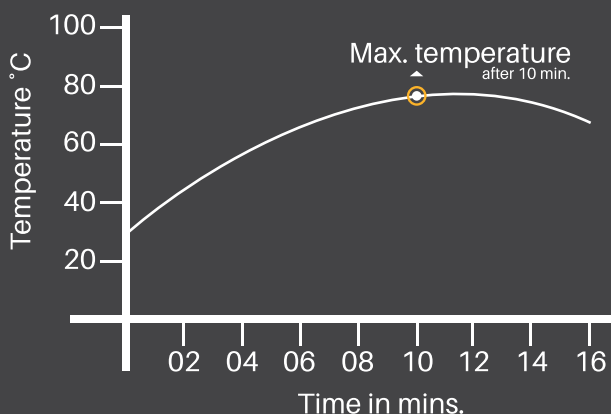

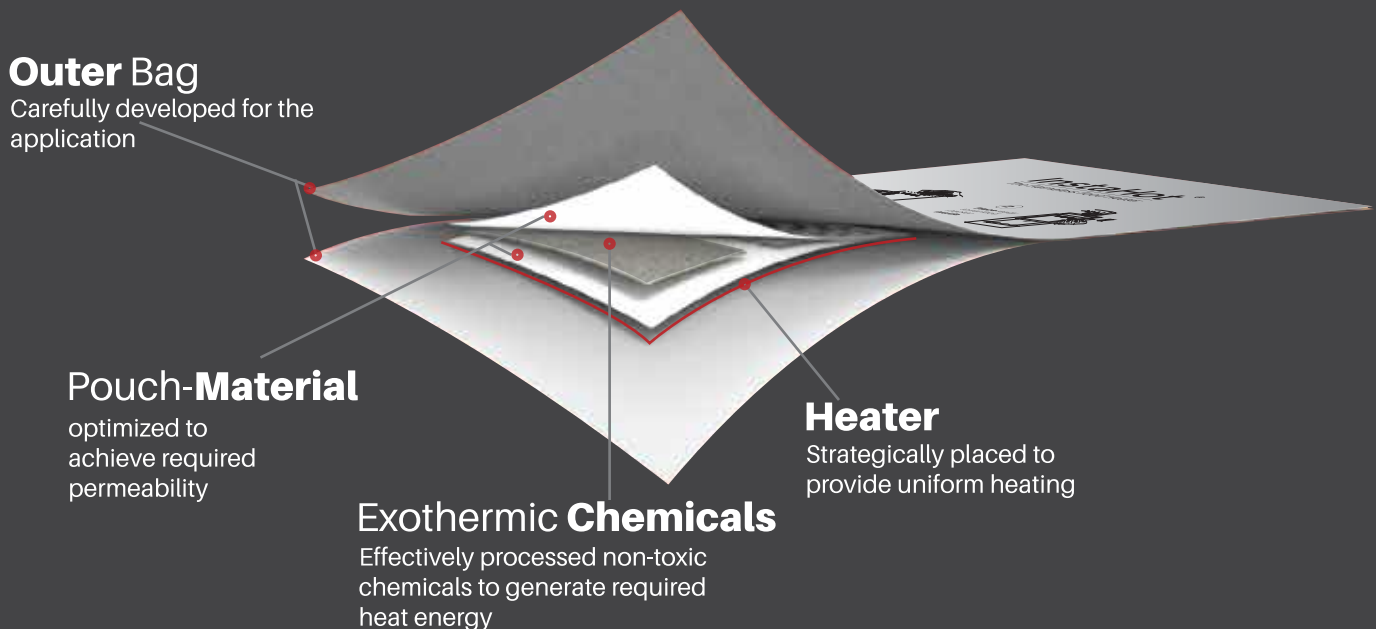

Frozen

Paratha and others

All types of home cooked food can also be heated using zipper bags provided with **InstaHot- Travel Kit**

● Technology

InstaHot generates the heat energy through the exothermic chemical reaction of metal powder and oxides in the presence of water. Once processed the proprietary chemicals are packed in a heater pouch. The packed chemicals upon coming in contact with water initiate an exothermic reaction. This exothermic reaction is the heat source for InstaHot. The heater pouch is placed at the centre of the bag to ensure that the food is heated uniformly.

- ◆ InstaHot provides a temperature rise of 45C for a 300g pouch under standard conditions
- ◆ InstaHot has been tested under different climate conditions
- ◆ Tested as per RoHS 2011/65/EU for heavy metals and EU/10/2011 for chemical migration analysis
